

MT-SVT001

Product Description

Virus Transport Medium is for the preservation and transportation of virus, chlamydia, mycoplasma and ureaplasma.

The standard VTM is mainly composed of Hank's solution, gentamicin, fungal antibiotics, cryoprotectants, biological buffers, and amino acids. It can maintain the integrity of the virus in the temperature range from 2°C-30°C, and also reduce the speed of virus decomposition and increase the positive rate of virus isolation.

Specification

Item No.	MT-SVT001
Description	Standard virus transport medium
Specification	10ml tube with 3ml standard VTM
Packgae	50 pcs/box
Application	clinical diagnostics,molecular diagnostics,laboratory,hospital
